

The Frangible Panel provides blast pressure relief apertures with a protective barrier against environmental factors such as cold weather, rain and wind. Designed to cover vulnerable openings, the Frangible Panel assists with temperature control, weathering damage and privacy without obstructing blast pressure relief. It can be used in various high-risk sites for additional protection, including army posts, data centre halls, generator housings and more.

For additional security, the Frangible Panel can be used in combination with the BenweldSecure Barras and Billinghurst barsets. Installing a barset on top of the panel provides protection against physical security threats.

FEATURES:

- Covers blast pressure relief apertures to protect interior contents from hazardous environmental factors
- Used in conjunction with BenweldSecure's Barras and Billinghurst grilles

DETAILS

PRODUCT REFERENCE:	BenweldSecure Frangible Panel
SECURITY RATING:	Contact BenweldSecure for further details
FINISH AS DELIVERED:	Stainless steel as standard
CONSTRUCTION DETAILS:	As approved drawing - contact BenweldSecure for further information
INSTALLATION:	BenweldSecure-approved operatives
APPROVED ACCESSORIES:	BenweldSecure Barras and Billinghurst grilles*
